Internet of Things (IoT) and Cloud Computing: Building Connected Ecosystems

CSA1515-CLOUD COMPUTING AND BIG DATA ANALYTICS

PRESENTED BY

RUPESH I(192511170)

UNDER THE GUIDANCE OF

Boomija M D

INTRODUCTION

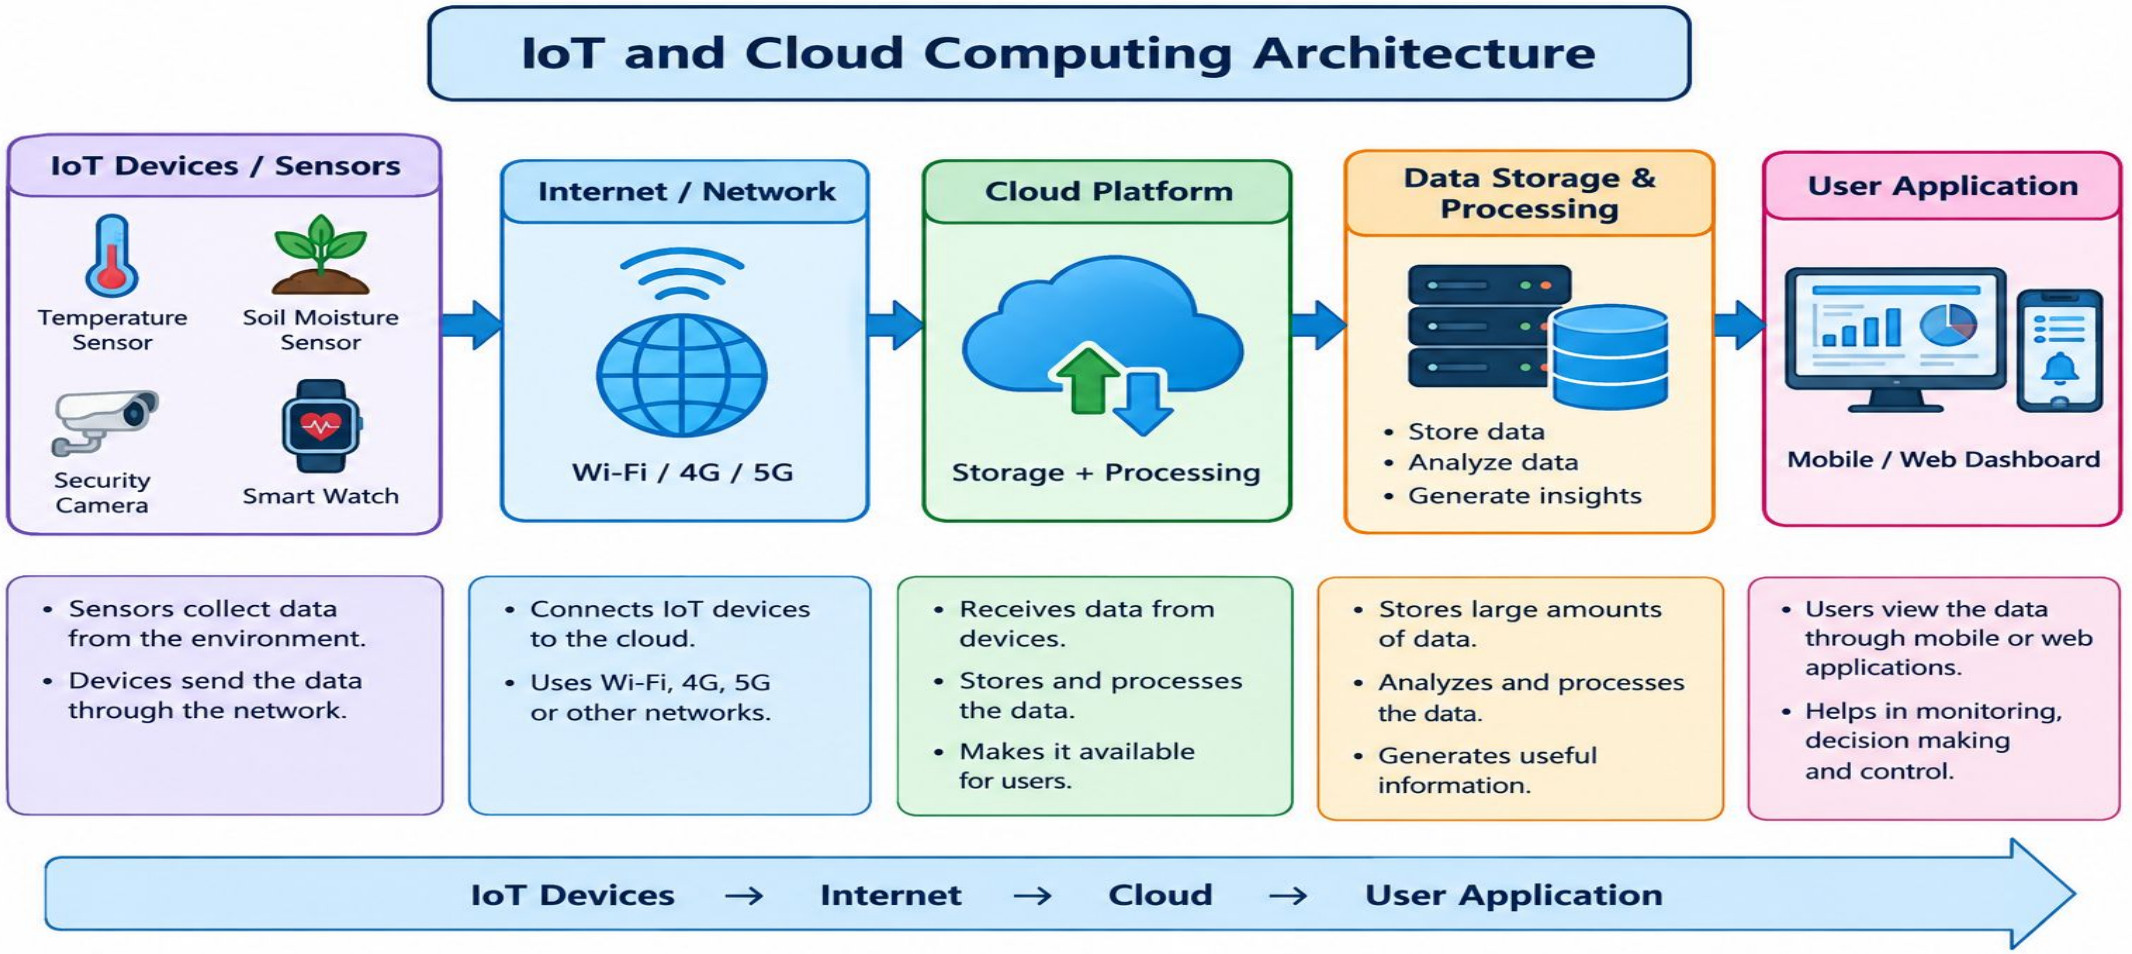

- IoT connects physical devices to the Internet.
- IoT devices use sensors to collect data.
- Cloud Computing provides storage and processing of IoT data.
- IoT and Cloud work together to create smart connected systems.
- They are used in areas such as smart homes, agriculture, industries, and smart cities.

CORE TECHNICAL EXPLANATION

- IoT connects physical devices to the Internet.
- IoT devices use sensors to collect data.
- The collected data is sent through a network.
- Cloud Computing provides storage and processing for IoT data.
- Users can access the processed information through applications.
- **Simple concept:**
  IoT collects data → Cloud stores & processes data

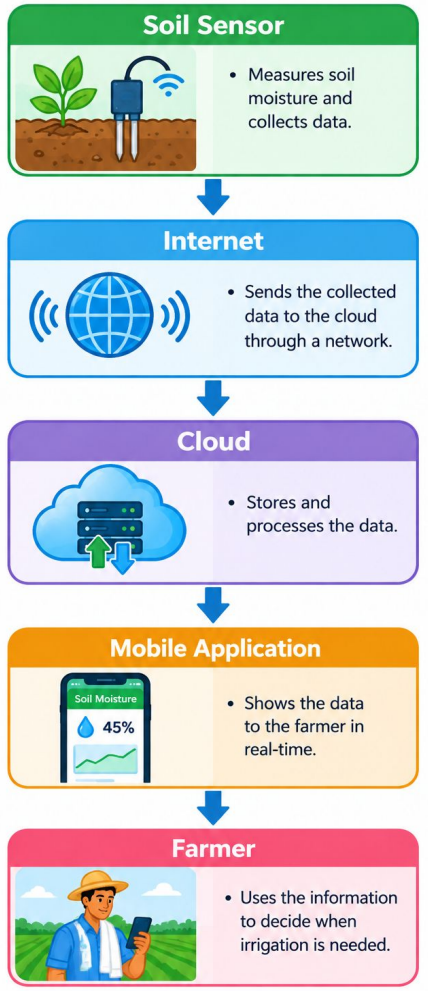

Architecture Diagram

Real-World Use Case

Smart Agriculture

- Soil sensors measure moisture.
- The sensor sends the data to the cloud.
- Cloud stores and processes the information.
- Farmer monitors the data through a mobile application.
- The farmer can decide when irrigation is required.

Conclusion and Key Takeaway

- IoT connects physical devices to the Internet.
- Sensors collect real-world data.
- Cloud Computing stores and processes the collected data.
- Together, IoT and Cloud Computing create smart connected systems.
- **Key Takeaway:**

“IoT collects the data, while Cloud Computing stores and processes the data.”
