Assessment Tool:-3

Co:-1 Cloud Computing

1) Define Cloud Computing and explain any four characteristics that make it different from traditional on-premise computing
2) Trace the evolution of cloud computing from hardware evolution to internet software evolution, and show how these changes enabled modern cloud platforms.
3) Explain the role of server virtualization in cloud Computing?
4) Discuss the role of data Centers in delivering cloud service
5) Differentiate Iaas, Paas, saas, and xaas.

Answer:-

1) Cloud computing:- Cloud computing provides computing service over the Internet

The four characteristics of cloud computing:-

on demand:- Resource are available when we needed.

Broad access:- service are accessible from different device.

Resource Pooling:- The Resource pooling are shared among user.

Rapid elasticity:- Resource increases (or) decreases according to demand

Example:-

Google drive.

2) The evolution of the Cloud Computing from the hardware evolution to the software evolution, like

Main frames:- Large centralized computers

Personal computers:- clients communicate with servers.

virtualization:- one server runs multiple virtual machine.

Internet :- Application become accessible on the online

Cloud computing:-

The Cloud computing provides computing service over the Internet.

3) The virtualization creates a multiple virtual machines on one physical server.

* Saves hardware costs
* Improves resource utilization.
* supports multiple operating system.

Difference virtualization is a technology, while cloud computing delivers computing resource as service.

Example:
VM Ware. ESXi, Virtual Box.

4) Data center is a physical facility that contain server storage system, networking equipment and ~~security~~ security system

* Data storage
* Data processing
* Resource sharing
* High Availability
* Security
* scalability.

s) Differentiate Iaas, Paas, Saas, and Xaas.

Iaas:
* Infrastructure as a service
* Provides virtual Infrastructure
* Ex: Amazon EC2

Paas: platform as a services.
* Provides a platform to develop application

Ex: Google APP Engine

Saas : Software as a service
*provides ready to use Software

Ex: GMail

Xaas: : anything as a service
* Provides different IT services over the Internet

Ex: Dropbox:
